

Revise-Rejected Paper Editing

Assignment: ABCDE-X

Title: (hidden to protect author privacy)

Original Journal: Medical and Veterinary Entomology

Revised Journal: Medical and Veterinary Entomology

Manuscript Status: The reviewer(s) have recommended some revisions to the author's manuscript. The author has been invited to respond to the reviewer(s)' comments and revise the said manuscript.

Thank you for choosing Enago. Our expert reviewer has evaluated your manuscript and the findings are presented in this report. We first show the evaluation of your responses to the journal reviewers' major objections. Then we present a summary of unresolved issues in the manuscript. Finally, we list next steps in order to make the manuscript suitable for journal publication. Please go through the report carefully and carry out the recommended next steps.

Thank you again for choosing Enago to help you!

SAMPLE

Evaluation of responses to Reviewers' major objections

Reviewer Objection	Author Action	Expert Evaluation
The introduction needs to be rewritten such that it depicts a brief review on earlier works on experimental transmission of the bacterium, rationalize the use of mouse species in their study, and mention objectives.	Revised the Introduction and included the objectives of conducting the study. Added more background information relevant to the study, along with rationalizing the use of mice as the experimental study object.	The revisions are in line with the reviewer expectations, and the required details have been added satisfactorily.
The discussion presents data that are not actual discussions but further descriptions of the method.	Discussion was amended to include text explaining the present results, significance of the present study, and the limitations.	The revisions address the reviewer's concerns appropriately, and now add more value to the discussion. However, based on the details added, you may also need to add more supporting references to corroborate the present findings.
Some key terms (namely ornithophilic, anthropophilic, and zoophilic) have been used interchangeably.	"Anthropophilic" was removed; the other 2 terms have been checked and used consistently at appropriate instances.	The terms that were retained have been placed at appropriate locations. Tip: At instances where the usage may appear ambiguous to the reader, you may also elaborate on the term. For example, in the Discussion section, line 21 of page 15, I suggest you clarify further the usage of "zoophilic".

Reviewer Objection	Author Action	Expert Evaluation
The interpretation of the data in the discussion seems unclear.	Data interpretation has been improvised in the revised discussion section.	No additional comments regarding this aspect.
The current manuscript only cites one study published since 2009.	Included 3 more relevant studies as references, and all of them have been published after 2009.	The references have been added in the bibliography list at the end of the manuscript but not cited in the main text. For other unresolved issues, please check Table 2 below.
Complete supplier information has not been provided for all the commercial products used.	Inserted supplier information with country names alongside all the commercial products used in the present study.	The journal also requires you to add the trademark (™) or registered trademark (®) symbol to the commercial product names. For other unresolved issues, please see the section below.

Unresolved issues

Issue	Expert suggestion
The reviewers had commented that more explanation of the infection mode and spread would be helpful. How did you distinguish speech from music? How was a vector defined? What was the acute inflammatory period like (symptoms, pathology, etc.)? (Pages 9–10) A figure showing the progression of infection could be presented.	We suggest providing these details succinctly before reaching the conclusion part of discussion, and supplying the figure as suggested with an appropriate legend.

Next Steps

We recommend Normal Editing service (<http://www.enago.tw/normal-editing.htm>) for language and grammar editing, especially for the added parts.
